- ✚ SALES
- ✚ INSTALLATION
- ✚ MAINTENANCE
- ✚ REPAIR
- ✚ MODERNIZATION
- ✚ REMODERNIZATION

OUR PRODUCT

1. MACHINE ROOM (MR) ELEVATOR

This elevator has ropes that pass over a wheel attached to an electric motor located above the shaft. The main function of the ropes is to raise and lower the elevator car. It can be used for both mid and high-rise applications and can travel much faster than hydraulic elevators.

Like other elevator types, this system uses a counterweight, which eliminates the weight of the occupants and the car so that the motor has an easier job moving the elevator load.

2. HYDRAULIC ELEVATOR

Hydraulic elevators are normally given support by a bottom-placed piston. The purpose is to push the elevator car up while an electric motor forces hydraulic fluid down the piston. When it's time for the elevator to come down, the valve releases the hydraulic fluid from the piston. This type of elevator is mostly used in 2 to 8 story buildings and can only travel at a maximum speed of 200 ft per minute. Kinds of hydraulic elevators:

- i. Roped Hydraulic Elevator
- ii. Conventional Hydraulic Elevator
- iii. Hole-less Hydraulic Elevator

The main reason hydraulic elevators are popular is because they are more affordable to set-up and still have relatively lower maintenance costs when compared to other elevators.

Hydraulic elevators utilize more energy because they use an electric motor that works against gravity. You should regularly check the hydraulic fluids because a small leak could easily lead to a catastrophic event or become an environmental hazard.

3. MACHINE-ROOM-LESS (MRL) ELEVATOR

Most elevators are designed with a machine room located above the elevator shaft. This type of elevator has a machine fitted in the override space, and it can only be accessed through the top of the elevator car whenever maintenance is required. This type of elevator can only travel a distance of 250 feet with speeds of up to 500 feet per minute.

MRL elevators are gaining popularity with mid-rise buildings because they conserve energy and require less room during construction.

4. STAIR LIFTS

5. ESCALATOR

OUR LIFT FEATURES

- Car (Cabin)
- Ceiling
- Landing Door & Floor
- Handrail
- COP & LOP
- Traction Machine
- VVVF Door Machine
